

AVOID SHUT DOWNS WITH SIDE STREAM FILTRATION

Engineered Solutions to Save You Money

**Keep your heating and cooling systems operating
at optimal capacity**

Heating and cooling systems can become plugged and require filtration to operate at optimal capacity. Rain for Rent's water storage tanks and filtration systems, can provide the filtration you need on your cooling system, allowing your project to stay online reducing the possibility of down time. Our systems are designed by our in-house engineering and filtration specialists to ensure settling time is optimized prior to filtration. Training and system operation can also be part of the services we offer should you require it.

**Call or visit us online to get a
quote for temporary storage**
